BRUSH WATTLE

Paraserianthes lophantha

Also known as shrub wattle, this fast-growing, fast-maturing tree originates from Western Australia and has become a problematic weed in recent years. With its long-lived seeds and high toleration to poor soils, salt, wind and drought, the brush wattle tends to pop up in shrubland, urban areas, dirt banks and any other bare land.

This is a short-lived tree that grows up to 10m tall. With small branches of feathered leaves, 20-30cm long in maturity, it bears tiny yellow-green flowers that grow together to resemble a bottlebrush between May and August. The seed pods are green to brown and contain pungent smelling seeds.

This weed is less common in areas with other tree/shrub species of similar height. Maintaining native ground cover is also advised to help control seedling growth.

PHYSICAL CONTROL

Dig or pull out seedlings all year round.

Cut down wattle trees and then any regrowth that may occur.

CHEMICAL CONTROL

Cut back to stump and immediately apply [Cut 'N' Paste Metgel](#). Multiple applications may be necessary as regrowth may occur.

Option 2

Cut back to stump and paint the stump with [Woody Weedkiller](#). Spray any weakened new growth with [Woody Weedkiller](#) if necessary. However, care should be taken as neighbouring desirable plants may also be affected.

BRUSH WATTLE PRODUCT RECOMMENDATIONS

Shop the Kings online store for all your gardening needs

CUT'N'PASTE MET GEL

Easy to use heavy duty weedkiller. For best results cut and paste gel on immediately or paste onto the underside of leaves. Avoid using on wet days.

WOODY WEEDKILLER

Particularly effective weedkiller to use on woody scrub weeds, hard-to-kill broadleaf weeds and re-sprouting tree stumps.

Everything you need!
