CITRUS VERRUCOSIS

Elsinoe fawcetti and *Elsinoe austealis*

A fungal disease also known as Citrus scab or Verrucosis that causes raised warty lesions to appear on fruit and leaves, often causing the leaves to buckle. While the disease doesn't cause major problems it should still be treated as it negatively affects the health and vigour of the tree, making trees more susceptible to other problems.

Fruit is still edible, though less attractive.

Spores of the fungus are spread during wet weather and are dispersed by rain splash and wind. They live in the corky growths on the fruit and leaves, fruit remain susceptible for up to 3 months after petal fall.

PREVENTION

To reduce the risk of your trees being affected by this fungus, ensure they are planted in full sun, in free-draining soil rich in organic matter. When pruning your trees prune to open up the center of the tree to allow better air flow.

As healthy plants are less likely to suffer from diseases, feed your plants regularly with [Kings Citrus & Fruit Tree Food](#) along with monthly applications of [Aquaticus Garden Booster](#).

When watering, water well and deeply so that the water reaches the roots and does not run off the top of the soil. Well watered plants are less likely to come under attack than plants suffering from moisture stress.

In addition a regular spray program will help prevent and keep Verrucosis under control.

NATURAL TREATMENT

Spray with [Grosafe FreeFlo Copper Fruit and Vegies](#) before and after blossom fall.

Mix the [Grosafe FreeFlo Copper](#) with [Grosafe Eco Spread](#) added to the water. This product helps the spray droplets to spread out and stick to the leaf, giving a better result.

OTHER TREATMENT

Spray with [Yates Copper Oxychloride](#) before flowering and again at 3-4 weekly intervals up until harvest.

Remember prevention is better than cure. Therefore regular spraying is important.

When using sprays and chemicals always read the label and follow instructions carefully. Spray in the evening to avoid harming beneficial insects.

CITRUS VERRUCOSIS PRODUCT RECOMMENDATIONS

Shop the Kings online store for all your gardening needs

YATES COPPER OXYCHLORIDE

Copper oxychloride. A fungicide that controls a wide range of fungal and bacterial diseases on fruit, vegetables and ornamentals protecting the plant.

FREE FLO COPPER

An organic copper hydroxide that controls a wide range of fungal and bacterial diseases on fruit, vegetable and ornamental plants. Certified Organic.

Everything you need!
